CAST Well Light Accessories - Increase Safety & Reduce Maintenance

CWLG1CB

Description:

CAST Lighting recommends the use of one or more of the following accessories to increase the safety and reduce maintenance on your well light installation.

CWLG1CB:

A 6.75" diameter solid bronze grate that secures to the well light housing using a 3-32 hex head cup point screw with a 10/24 thread X 1-1/4" long. This application should be used in the areas where well lights will be exposed to traffic.

CWLG2CB:

A 6.75" diameter solid bronze grate that secures to the well light housing using a 3-32 hex head cup point screw with a 10/24 thread X 1-1/4" long. The opening in the middle allows for optimal light output and measures: 3 1/8" x 1 5/8". This application should be used with the MR-16 well lights and LED Ground Lights.

CWLGLENS:

This is an optional application to be used with the CWLG1CB and CWLG2CB. This is a flat glass, 4.35" in diameter (XCGGL) that secures to the underside of the grate using (2) 8-32 screws with nylon washers, included with purchase. The use of the CWLGLENS can help prevent the buildup of debris within the well light.

CWLR1CB:

A 5.5" diameter solid bronze ring, which includes a 5.25" convex pyrex glass lens (XCG538) and secures to well light housing with 2 stainless thumb screws. This is for use in non-traffic areas, such as planting beds, where it will keep debris from building up inside the well light.
